It may not display this or other websites correctly. You should upgrade or use an alternative browser. The issue is that it is not very loud at this level at all, i.e. you cant tell if the sub is on from 5m away. I have the crossover frequency on the subwoofer set to 140Hz and the low pass filter for the LFE channel set to 120 Hz the highest available as suggested by the speaker manual. Any suggestions on what the issue could be. I am sure it should be able to be louder than this.

Also, how could I tell if the sub was damaged by one of my stupid friends playing it with a lot of distortion for a few moments. Thanks for all your help! Does the 608 come with the audessy calibration microphone my 808 does and makes me set the volume on the sub to 75db before I set anything else then it plays the tones to set the volumes on the speakers as well as their frequencies and volume db offsets and distances.I tried adjusting the crossover and also calibrating with the audessy calibration microphone. Neither helped and I took the sub back to Barletts HiFi where I bought it. They confirmed the issue and said it was the base unit so Cabasse are sending me a new sub. Top marks to Barletts and Cabasse for sorting this out as quickly as possible. Thanks for all your help! Join the AVForums team live on Sundays at 7pm. This passion has driven the company to innovate nonstop, to design and create acoustic material that is more and more refined.
