A big bookshelf with balls. I bet they, and you, will love the TFM45 driving them. Looking forward to your impressions. Part of that is I'm not into most of the typical shows, and part is I'm just so overwhelmingly sick and tired of paying for one service after another. I need my internet, and Website for obvious reasons, but I'm trying to ditch as many payasyougo things as I can. I will admit, my interests are not going to work for many, but I'm content with it, and it works on my various android boxes, tablets and PCs. I live in Northern California as well. Where is your city My name is Paul and I am in Santa Rosa. For example, the Component should not be situated on a bed, sofa, rug, or similar surface that may block any ventilation openings; or placed in a builtin installation such as a bookcase or cabinet that may impede the flow of air through ventilation openings. A Component and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the Component and cart combination to overturn. See an Authorized Carver Dealer for more information. This pertains to dualvoltage units only. In fact, many features that are now considered standard surround sound and advanced signal processing had their first successful consumer applications in Carver products. Our continuing goal is to provide affordable products of exceptional quality, aimed at reproducing sound with absolute accuracy. It was developed to fulfill one main role, which is to amplify the audio signal without any sort of degradation or distortion. This is achieved with our Total Direct Coupling design which improves the damping factor of the amplifier. The higher the damping factor, the better the amplifier will have control of the speaker movement. <http://ahlhy.com/uploads/file/2020/08/282137095276.xml>

This leads to more accurate sound reproduction, the speakers are doing exactly what you want them to, without any extraneous cone motion. The traditional stabilizing method comes at a price, although it gives good damping factors in the bass and midrange, it reduces the damping factor at higher frequencies. This can cause rolloff or peaks in the high frequency performance. In essence, the signal path between the speakers and the amplifier is uninterrupted and the frequency response remains flat at all levels and loads. This design creates a totally stable power amplifier and provides a high damping factor at any frequency not just in the bass and midrange. The result is pure clean sound with inaudible distortion. The amplifier makes full use of a modular design philosophy and openframe architecture. This allows for efficient and cost effective assembly while providing superior isolation and low noise operation. The chassis is designed to provide good air access to the heat sinks with improved dissipation of heat away from the high current output devices. This attention to detail comes from our reputation for reliability and longevity. Thank you for placing your confidence in Carver Corporation. We know that your amplifier will provide you with many years of listening enjoyment. Make sure that you save the two end caps which come in the box. These are used if you do not want the handles fitted. If you notice any shipping damage, please contact your Carver Dealer immediately. They can be replaced with the two supplied end spacers, as follows This is required if you ever need to obtain warranty service. This provides us with important information from our valued customers. There is also a section for you to note any comments you may have about our products. Allow at least 3 inches of air space above the unit, and at least 1 inch on either side. Excessive heat is the single greatest source of component

failure. <http://www.doctorbiokon.com/userfiles/boss-rc-20xl-manual-pdf.xml>

If fluid or a foreign object should enter the unit, disconnect the power plug and contact your Carver dealer or an authorized service center. All power amplifiers contain transformers that are surrounded by a fluctuating magnetic field which can erase magnetic tapes or floppy disks. The voltage of your A220 is marked on the rear panel near the power cord. The 240 volt version will draw 3.2 amps. Do not use the preamplifiers convenience sockets as they are meant for lower power components such as CD players or Tape decks. Most do not have enough current to run an amplifier. See page 13 for more information about using the A220 in Mono. Usually, you would leave these controls in the fully clockwise position. You would still be able to get the full output power from the amplifier but you would have to rotate the preamp volume control further than before. They will accept bare wire or banana plugs but not spade terminals. See page 11 for more details. The 0 dB mark will then represent 11 watts instead of 110 watts. This is because the meters are indicating the average power output. Momentary musical peaks can drive the amplifier to its maximum output for brief periods, faster than the meter needles can respond. If this occurs, you should reduce the volume level. This is the main controller which allows you to select the source and to adjust the volume. For the A220 to reach full power output, your preamp should have an output voltage of 1 Volt rms or more. There are many different grades of cable available and you might want to ask your Carver dealer for advice. The main thing is that they should be fully shielded and as short as possible for the job. Try to layout the system so that most patch cords are less than six feet, perhaps most will be three or four feet long. Be gentle or you may damage the jacks of the amplifier or your other components. Video connections are usually yellow.

The greater the distance between your A220 and speakers, then the larger the diameter of the wire. Use the following chart as a guide Also connect the Black amplifier terminal to the Black speaker terminal. For example, if you have one loud drum beat, both speaker cones will be moving outwards at the same time. This will cause a cancellation and result in a bass reduction. The Black speaker terminal connects to the RedRight amplifier terminal. The amplifier Black terminals are not used in Mono mode. Tighten the connection down onto the wire finger tight only, DO NOT use a wrench. They show how the inputs and outputs on the rear panel of the A220 are connected to your preamplifier and speakers. This is also called bridged mono and is useful for driving a powerful single speaker such as a center channel or a subwoofer. The A220 can be used in combination with different amplifiers or with a powered subwoofer. You could also use a three channel amplifier to drive the left, right and center speakers and then use an A220 to drive the surrounds. Also make sure that the selector box is capable of safely handling the full power output of 110 watts. This will prevent the amplifier from being overloaded and tripping its protection circuits. This will prevent the amplifier from being overloaded and tripping its protection circuits. Do not connect anything to the Right input jack. There is a line fuse to protect the amplifier in case of a major internal failure. In addition, each channel has fuses to protect the individual output stages. If a fuse should blow, take the A220 to a Carver Authorized Service Center for fuse replacement and testing to determine the reason for the failure. If the amplifier is driven hard into a low impedance speaker, or the speaker wires should accidentally short together, the muting relays will switch off and the output of the amplifier will be disconnected.

If the amplifier senses that the high current situation still exists, the relays will switch off again. If this cycle persists, check the output connections and wiring to make sure there are no shorts. If not, it may become necessary to either reduce the volume or change the total impedance of the speakers connected to the amplifier. The fuse should blow before any damage occurs to the speakers. Use the fuse value recommended by your speaker manufacturer. If you cant find this information, the following graph will help you determine the speaker fuse value to use. Most likely, the problem lies elsewhere in the system or with a button or control inadvertently left in the wrong position. Try

removing and reinserting the plug. You can test the wall receptacle by plugging in a lamp and seeing if it turns on. Verify that the outlet is switched on. Refer to authorized Carver Service Center. If the items listed below check out, then the problem may be internal to the A220. If the source unit has a headphone jack, you might use a set of headphones to check the operation of the source component. Try unplugging the headphones. Be sure that there are no small strands of wire touching similar strands coming from the other wire in the cable. If you use banana plugs, be sure the setscrews in the plug are securely tightened. If fuses are installed in the speakers or the speaker cables, verify that they are not blown. Play a CD and then turn up the level controls to the desired volume. If you still cannot hear the CD then the A220 or the speakers have a problem. If the CD plays fine then the preamp may be faulty. After turning the unit back on, see if the same speaker is dead or distorted. If it is, the fault lies with that speaker cable or the speaker. You can check for a possible cable problem by substituting a good set of cables. If the problem does change sides, the fault is in the preamplifier.

Lighting fixtures such as dimmer switches or Halogen lamps are a common cause of interference. If the hum stops, the problem lies with the original source component. If the hum stops, contact your cable provider to check the cable ground. Your preamp should have an output of 1 volt or more for the A220 to reach its full power output. If you have something stubborn to remove, use a mild dish soap or detergent sparingly applied to a soft cloth. Don't use alcohol, ammonia, or other strong solvents. Also be sure to save the sales receipt in a safe place. It will be necessary for warranty service. Should the Dealer be unable to take care of your needs, please contact us at the Factory.
